Fonte Linda Naturale/Still OLIGOMINERALE

The natural Mineral Water "Fonte Linda" gushes out bacteriologically pure from the source situated in an ancient glacial river basin of the Lombardic PreAlps, in the Natural Park of the "Alto Garda". The water originates in a sound environment, particularly relaxing, amidst natural forest nestled in fields of green. Characteristics and indication of the "Fonte Linda" mineral water: The natural mineral water Fonte Linda contains total dissolved solids (t.d.s.) of 0,388 g/l; placing Linda water in the category of "low in mineral content", a characteristic that favors diuretic effects. About Linda mineral water it's important know that own mineralization is due to the presence of bicarbonate (361 mg/l), mineral element that the water takes naturally during its underground run. The main property of bicarbonate is that stimulates proper digestion.

The digestion property are granted following scientific test effected by Prof. Gasbarrini G. of the University of Cattolica del Sacro Cuore in Roma Facoltà di Medicina e Chirurgia "Agostino Gemelli".

Fonte Linda is a water indicated for a low sodium diet containing the lowest amounts sodium, less than 0,002%.

The main quality of Fonte Linda mineral water, light, good tasting and the equilibrium of minerals are recognized and authorized by Health Ministry with Decree n. 3543 of 10/03/2004 that are: **"It may have diuretic effects", "Suitable for low sodium diets" and "Stimulates proper digestion"**.
